

E-BUSINESS SUITE OVERVIEW

Integrated Business Applications for your Enterprise

Having business processes and data integrated together in a unified system allows your business to function at its peak. Arisant leverages both functional and technical knowledge of Oracle® E-Business Applications to bring your Finance, HR, Sales, Customer, and Warehouse data together, allowing people to communicate and share information more effectively.

Imagine having all of the important data affecting your business functions accessible in a single location:

- Customer related data interacts with Orders and Invoices, allowing your warehouse to process orders efficiently.
- Receivables and Payables numbers balance and interfacing with Customer related data, allowing you to invoice and pay statements per your business requirements.
- Human Resources use employee and company data to determine the best strategy for your work force. Employee data is available from recruitment to retirement.
- Project data in a single view that allows you to manage, budget, allocate resources, and properly cost projects as they impact your business.
- Manage all of your contracts as they relate to sales, service, projects, and procurement.

These are only a few of the improvements your company may explore, depending on the products and configuration you choose. Even though Oracle E-Business Suite can be extensive in scope, it is flexible enough to allow you to implement only the modules that apply to your requirements. Arisant can help you design and customize a final solution that represents your business processes and needs.

E-BUSINESS SUITE OVERVIEW

Key Benefits

Integrate and Secure Financial Information

Every accountant, sales representative, business unit, and your CFO will have access to the same integrated financial data and will be able to view information that pertains to their role. Implementing each area using specific responsibilities allows you to preserve the integrity of your data and maintain security compliancy.

Integrate Customer Order Information

Customer Service receives an order, the warehouse follows it through by shipping the order out, and Accounting completes the transaction by sending an invoice and receiving payment.

Standardize Processes and Improve Visibility

Standard processes and integrated data increase productivity, saving time and resources.

Standardize HR Information

Track employee data from recruitment to retirement, and analyze that data to facilitate workforce planning.

Business Intelligence as a Natural Extension

Gather pertinent data using Daily Business Intelligence (DBI) and integrate it with a Business Intelligence Solution. This provides the ability to analyze comprehensive data that influences your business.

E-BUSINESS SUITE OVERVIEW

Common Key E-Business Components

E-BUSINESS SUITE OVERVIEW

Why Arisant?

Arisant works with your business team to create a collaborative environment, identifying critical success factors, targeting key processes and defining the appropriate solution. Our main purpose is to help you to design and manage an E-Business solution that fits your requirements. Additionally, Arisant's expertise with Oracle products extends far beyond installation and implementation, and encompasses the important elements necessary for business stability and continuation.

Implement a subset or the whole suite, convert and migrate legacy data, develop customizations, and define and implement the functional specifications; Arisant supports your team while delivering a complete solution in a timely, cost effective manner.

For more information, or to schedule an on-site presentation, please contact Arisant at sales@arisant.com or 303.330.4065.
